

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

1. (Previously presented) An isolated antibody which specifically binds to an antigenic molecule from an isolated human herpes virus,

wherein said isolated human herpes virus has the morphology of a human herpes virus and a double-stranded DNA genome of about 170 Kb,

wherein genomic DNA from said isolated human herpes virus comprises a nucleic acid sequence of molecular clone ZVH14 (ATCC Accession No. 40,247); and

further wherein said antibody does not specifically bind to an antigenic molecule from

- (a) Epstein-Barr virus;
- (b) human cytomegalovirus (CMV);
- (c) I Herpes Simplex virus (HSV);
- (d) Varicella-Zoster virus (VZV); or
- (e) Herpes virus saimiri.

2. (Previously presented) A method of detecting human herpesvirus-6 (HHV-6) in a biological sample comprising the steps of:

(a) contacting the biological sample with the antibody of claim 1, under conditions such that the antibody will specifically bind to a human herpes virus antigenic molecule present in said biological sample whereby a complex is formed of antibody and antigenic molecule; and

- (b) detecting for the presence or absence of the complex.

3. (Cancelled).

4. (Previously presented) A method of detecting in a biological sample an antibody that specifically binds an antigen from an isolated human herpes virus, said method comprising the steps of:

(a) contacting the biological sample with said human herpes virus antigen, under conditions such that the antibody will specifically bind to the human herpes virus antigen; whereby a complex is formed of antibody and human herpes virus antigen; and

(b) detecting the presence or the absence of the complex,

wherein said isolated human herpes virus has the morphology of a human herpes virus and a double-stranded DNA genome of about 170 Kb,

wherein genomic DNA from said isolated human herpes virus comprises a nucleic acid sequence of molecular clone ZVH14 (ATCC Accession No. 40,247); and

further wherein said antibody does not specifically bind to an antigenic molecule from

- (i) Epstein-Barr virus;
- (ii) human cytomegalovirus (CMV);
- (iii) Herpes Simplex virus (HSV);
- (iv) Varicella-Zoster virus (VZV); or
- (v) Herpes virus saimiri.

5. (Previously presented) The method of claim 4, wherein the biological sample is serum.

6. (Previously presented) The method of claim 4, wherein the biological sample is from a patient.

7. (Previously presented) The method of claim 4, wherein said method comprises an immunofluorescence assay.

8. (Previously presented) The method of claim 4, wherein said method comprises an ELISA.

9. (Previously presented) The method of claim 4, wherein the antigen is immobilized on a solid surface before the step of contacting.

10. (Previously presented) The method of claim 9, wherein the antigen is immobilized onto nitrocellulose.

11. (Previously presented) The method of claim 10, wherein said method comprises a Western blot.

12. (Previously presented) The method of claim 4, wherein the human herpes virus antigen is present on an intact herpes virion.
